

SSI Showcase 2023

Reducing surgical site infections - evidence from global surgical research

Patient outcomes on a global scale can be significantly improved by reducing surgical site infections. A global collaboration of surgical researchers funded by the NIHR have undertaken high quality research into SSIs with 2 key publications in the Lancet due on the 31st October 2022.

The results will have a direct impact on your surgical practice.

Register your interest in our webinar to find out more about how to reduce SSI.

16th Jan 2023 - 11.00 AM and 18:00 PM (GMT)

www.globalsurgeryunit.org

Publications being released on the 31st October 2022

- Routine sterile glove and instrument change at the time of abdominal wound closure to prevent surgical site infection: pragmatic, cluster, randomised trial in seven low and middle income countries (ChEETAh)
- Elective surgery system strengthening: development, measurement, and validation of the Surgical Preparedness Index (SPI) across 1632 hospitals in 119 countries
